**NEWS FOR IMMEDIATE RELEASE**

**Parker Data & Voice's Technology Thwarts Cryptojacking**

HUNTSVILLE, TX — July 11, 2018 – Parker Data & Voice, LLC & PV Technology Services, LLC, a leading managed technology services provider, is helping small to mid-sized businesses (SMBs) to prevent cryptojacking attacks from damaging their organizations. Cryptojacking attacks, are derived from the widely popular cryptocurrencies, such as Bitcoin and Ethereum, and occurs when a corporate server is hijacked in order to facilitate cryptocurrency transactions by leveraging the inherent power of high-performance servers. As cryptocurrencies rely on an enormous amount of server power in order to facilitate transactions, many of the corporate servers that power small to mid-sized businesses have become an obvious target of cryptojacking attacks, as they are simply the most efficient vehicle for cryptojackers to exploit. Parker Data & Voice is currently protecting SMBs from this threat.

“Businesses that are under attack are often unaware of this threat because these attacks are specifically designed to be minimally intrusive and hard to trace,” stated Bill Parker, President at Parker Data & Voice. “Typically, cyber criminals set up their malware to run quietly in the background during daytime hours, only to extract maximum power during off-hours. It’s one of the telltale signs, yet this is rarely monitored by organizations that aren’t working with a reputable managed technology services provider. The result is that most businesses are flying blind and unaware that their security has been compromised, which doesn’t seem very dangerous on

the surface. However, this leaves many cryptocurrency hackers with access to very sensitive points within an organization that can be taken advantage of later.”

Most attacks take place when businesses are most vulnerable; after-hours and during migration to cloud-based solutions. During off-hours, cryptocurrency mining software can be installed quickly and without detection, creating a pivot-point where hackers can later install even more malware. Another vulnerable moment is when businesses are migrating their network to the cloud. The vulnerability here is because of the complexity and level of detailed attention required to successfully navigate these kinds of infrastructure transitions. Where most business owners simply add technology piece-by-piece, this fails to address the gaps in the network that arise glomming one solution onto another. Networks can quickly become messy and this is how organizations get exposed to hackers. In the case, of cryptojacking, it's no different.

“Business owners can protect themselves by taking the following actions, commented Mr Parker. “As a first step, they need to diagnose their network and segment the utilization of their data. By doing this, business owners or CTOs can see which devices, servers, and endpoints are performing optimally and which are underperforming. Underperforming servers can provide a hint that the organization may have been cryptojacked. Another action they can take is to make sure that they aren't vulnerable to exploit kits, which are tools hackers use to infiltrate networks via common business software. Lastly, businesses can direct their attention to systems that expose the network, like VPNs (Virtual Private Networks) or other cloud-based technology. While there are many more steps to take, these are very effective first steps to protect any organization from cryptojacking.”

## **ABOUT PARKER DATA & VOICE**

Parker Data & Voice, LLC and PV Technology Services, LLC, are sister companies, that provide managed cloud, hosted server and on-premise IT, data and unified communications solutions to small & medium sized businesses. We specialize in the energy sector, particularly exploration and production companies.

The company's mission is to "Deliver business technology solutions that help our clients improve business process efficiency, profitability and competitive advantage in the marketplace."

The company offers comprehensive service 24 hours a day, 7 days a week and emergency service guaranteed within 2 hours.

For more information on Parker Data & Voice, LLC or PV Technology Services, LLC, call (281) 783-4220 or visit [www.parkerdatavoice.com](http://www.parkerdatavoice.com).
